REPORT SELECTION

User ID: super123456 Demo Bank (R10)

Report Types (r/vVSDCQ/ASE(000200000000))

VSDC Personalization Assistant (VPA) tool allows you to generate different reports. To generate a report or a data output file, please select one of the following options:

- ☐ Generate a Business Report
- ☐ Generate a Technical Report
- ☐ Generate a Data Preparation Output File
- ☐ Generate a Visualize Stand-In Settings Report

CSV File Format

Back Generate Report

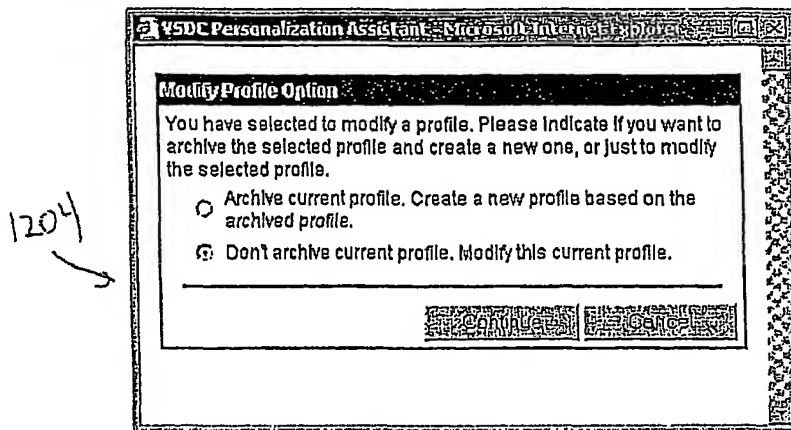

FIG. 11

More details on the Reports Selection screen is provided in Section 6.7.

6.5.1.2 Modify Profile

From the Profiles Listing screen, the user may choose to modify one of the profiles listed. On selecting a profile and clicking on the **Modify Profile** button, the user will be presented with the following screen:

NOTE: This information is CONFIDENTIAL and must be used exclusively for the operation of Visa programs. It may not be duplicated, published, or disclosed without Visa's written permission.

Here the user may choose either to archive the selected profile and create a new one using the archived profile as its base, or to modify the selected profile without archiving it.

FIG. 12

Note:

Profiles modified by the user will remain in a PENDING state until the configuration process has been completed. On completion of the process, the user can move the profile to an ACTIVE state.

On making the appropriate selection, the user should click on the **Continue** button.

6.5.1.3 Add Profile

If the user chooses to add a new profile, a box will appear requesting the following information be entered:

- Profile Label
- Member BIN
- Account Range ('to' and 'from')

NOTE: This information is **CONFIDENTIAL** and must be used exclusively for the operation of Visa programs. It may not be duplicated, published, or disclosed without Visa's written permission.

1308

1312

1304

1316

1520

FIG.13

Note:

New profiles added by the user will remain in **PENDING** state until the configuration process has been completed. On completion of the process, the user can move the profile to an **ACTIVE** state.

After all requested information has been entered, the user should click on the **Save** button to proceed to the next screen.

The next screen provides the user with a summary of selected VSDC features based on the default profile. For information on this screen please refer to Section 6.6.

6.5.1.4 Search Profile

The 'Search Profile' feature allows the user to search from a list of 'Active' or 'Inactive' profiles over a period defined by the user. The user may search by Bank Identification Number (BIN) or Account Range.

NOTE: This information is **CONFIDENTIAL** and must be used exclusively for the operation of Visa programs. It may not be duplicated, published, or disclosed without Visa's written permission.

1404

Search Profile Options

Select which conditions should be used to display the list of profiles. By default, the active profiles for the last 60 days will be displayed.

☒ Show all profiles, except INACTIVE profiles

☐ Show only INACTIVE profiles

☒ Show profiles for the last 60 days.

☐ Show profiles by date (minimum of 60 days).

Start date (MM/DD/YY): January 1, 2002

VSDC FEATURE SELECTION

User ID: supva2565x (Member Supervisor)
Demo Bank (B4C)

You can use this screen to change the features supported by the profile.

Visa recommended settings are provided. If you do not need to make any changes, select Next to proceed to the next screen. If you need to make changes, check/un-check the appropriate boxes. Once you are finished making changes, click on the Save button to save changes and remain on the current screen or click on the Next button to save changes and proceed to the next screen.

When you make changes that are in violation of a Visa best practice, a Warning box will pop up to alert you that this has taken place.

Additional information is provided with the items in blue text. You can place your cursor on the blue text to obtain a pop up containing a brief description of the item or double click on the blue text to obtain more detailed information.

1604
Selecting Your Optional VSDC Features
FEVSDCBASE.mch(1e13) (000000000007)

Your card must support a minimum set of data and functionality as follows:

- Account Data
- Cardholder Verification Methods (CVMs)
- Terminal Risk Management
- Card Authentication

The VSDC Personalization Assistant will walk you through the personalization decisions to ensure this minimum data and functionality are supported by your card.

In addition, you can support optional features based on your market requirements. Please select from the optional features below (Visa recommended optional settings are already checked for you):

- ☒ Offline Authorization Controls
- ☒ Offline Static Data Authentication (SDA)
- ☒ Offline Dynamic Data Authentication (DDA)
- ☒ Issuer Authentication
- ☒ Issuer-Script Processing
- ☒ Visa Low-Value Payment (MLP)

Note: Your card may not be able to support all of the optional features. Prior to selecting the optional features, you should discuss your card's capabilities with your card vendor. There may be limitations to specific features or options based on the card mask or based on the version of the Visa ICC Specification (VIS) the vendor used to develop the application (also referred to as the Application Version Number).

1608
FIG. 16

1612
1616
1620
1624

Note:

If during the process of selecting or deselecting a feature or function the user changes an option that results in a violation of a current Visa best practice, VPA will provide a warning box to the user alerting them to the violation. The user then has the opportunity to alter this selection, or to continue by ignoring the violation.

NOTE: This information is CONFIDENTIAL and must be used exclusively for the operation of Visa programs. It may not be duplicated, published, or disclosed without Visa's written permission.

Determining Where and How Your Account Can Be Used

	Domestic	International
➤ Cash	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
➤ Goods and Services	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
➤ Cashback	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Will you allow the card to be used at ATMs? ☐ No ☒ Yes

Will you allow the card to be used at terminals other than ATMs (point of sale, etc.)? ☒ No ☐ Yes

FIG. 17

For Issuer who choose to have more than one credit or debt application (using the same Application Identifier for each) on their card, this screen allows the user to uniquely identify each of these application using additional information referred to as the Application Identifier Extension.

NOTE: This information is **CONFIDENTIAL** and must be used exclusively for the operation of Visa programs. It may not be duplicated, published, or disclosed without Visa's written permission.

ACCOUNT IDENTIFICATION

User ID: supvs1565a [Member Super/sod] Demo Bank [840]

You can use this screen to set up the account identification information.

Visa strongly recommends that you use the Visa recommended settings and simply proceed to the next screen by selecting Next. If you need to make changes, check/un-check the appropriate boxes. Once you are finished making changes, click on the Save button to save changes and remain on the current screen or click on the Next button to save changes and proceed to the next screen.

Identifying Your Account New Profile w/ New Tags 1.22 (00000000012)

➤ Your account is a Visa Credit account. Therefore, the Identifier for this account is: A0000000031010

➤ Do you have more than 1 Visa credit/debit account on the card? ☐ No ☒ Yes

Note: A Visa credit/debit account is defined as either Visa Credit or Visa Debit – it does not include Visa Electron. Therefore, if your card only includes Visa Credit and Visa Electron (or Visa Debit and Visa Electron), you should answer No to this question.

➤ For cards with more than 1 Visa credit/debit account and for cards where you might add a credit/debit application to the card via a post-issuance download, you need to add additional information to this Identifier so that the terminal recognizes all of the accounts. This additional information is referred to as an extension. Please provide the extension in the space provided.

CONFIRMING USAGE OF YOUR ACCOUNT						
User ID: supvs2565a [Member Superscript]				Demo Bank [840]		

Confirming Usage of Your Account

Help Profile v New Tags 1 27 (000000000012)

1904

Do you have more than 1 Visa payment account on the card (e.g., a card with 2 Visa Credit accounts, a card with 1 Visa Debit and 1 Visa Electron account, or a card with 1 Visa Credit and 1 Visa Electron account)? ☐ No ☒ Yes

When there are two or more Visa payment applications on the card, you can elect to ensure that the cardholder confirms use of the application whenever the application is used -- however, at least one of those applications should NOT require cardholder confirmation. If you want to require cardholder confirmation on one of your Visa payment accounts, do you want it to be on this account? ☐ No ☒ Yes

Note: A terminal may not support cardholder confirmation of the application. If you require cardholder confirmation of the application and the card is used at a device that does not support it, the application will not be accepted. Therefore, if you require cardholder confirmation on this application, you should NOT require it on the other Visa payment application that resides on the card. This ensures that at least one Visa payment application on the card will be accepted at terminals that do not support cardholder confirmation.

Profile Complete

Save Cancel

Note:

FIG. 19

An EMV terminal may not support cardholder confirmation. If cardholder confirmation is required on an application and the card is used at a device that does not support it, the application will not be selected. Therefore, if cardholder confirmation is required on this application, the user should NOT require it on other Visa payment applications that reside on the card. This ensures that at least one Visa payment application on the card will be accepted at terminals that do not support cardholder confirmation.

6.6.4 Customizing Account Name

This screen allows the user to customize the account name of the application to be displayed in a specified language of choice, so that, in the event the terminal

NOTE: This information is CONFIDENTIAL and must be used exclusively for the operation of Visa programs. It may not be duplicated, published, or disclosed without Visa's written permission.

supports the language of choice, the account name would be displayed to the cardholder in that language.

OFFLINE LIMITS AND THRESHOLDS

User ID: supv2585a (Member Supervisor)
Demo Bank (840)

You can use this screen to set up your offline limits and thresholds.

Visa best practices and recommended settings are provided. If you do not need to make any changes, select Next to move to the next section. Once you have made your selection, click on the Save button to save the changes or click on the Next button to save changes and move on to the next section.

Defining Your Offline Limits and Thresholds
How Profile is How Tails 1-27 (000000000042)

Defining Your Offline Transaction Limits

1. Please provide the number of consecutive offline transactions allowed before an online transaction is required. 2

Note: This value cannot go below 2.

2. Please provide the number of consecutive offline transactions allowed before declining the transaction when an online transaction cannot be completed. 2

3. Do you wish to control the total number of offline international transactions allowed before declining a transaction when an online authorization cannot be completed? ☐ No ☒ Yes

Note: For this check, international transactions are those in a currency different from the card's currency code.

4. Please provide this number in the space provided. 2

5. Do you wish to control the total number of offline international transactions allowed before an online authorization is required? ☐ No ☒ Yes

Note: For this check, international transactions are those originating at a terminal in a country that is not the country of card issuance.

6. Please provide this number in the space provided. 4

Defining Your Offline Amount Limits

7. Do you wish to control the cumulative amount of offline transactions allowed in the card's currency before an online authorization is required? ☐ No ☒ Yes

8. Please provide this amount limit in the space provided. 000000000005

9. Do you wish to control the cumulative amount of offline transactions allowed in the card's currency before declining a transaction when an online authorization cannot be completed? ☐ No ☒ Yes

10. Please provide the cumulative amount over which a decline is generated in the space provided. 000000000006

Defining Your Offline Amount Limits in A Secondary Currency

11. Do you wish to control the cumulative amount of offline transactions allowed in either the card's primary currency or a secondary currency before an online authorization is required? ☐ No ☒ Yes

12. Please provide the secondary currency in the space provided. US Dollar

13. What is the relationship between the secondary currency and the card's primary currency, that is, how many units of the primary currency are equal to a single unit of the secondary currency? 0.019

14. Please provide the multiplication factor for going from the secondary currency to the primary currency in the space provided. 19

15. Please provide the number of digits of this factor that are to the right of the decimal point in the space provided. 3

Note: For example, if one unit of the secondary currency is .019 units of the primary currency, the multiplication factor is 19 and the number of digits to the right of the decimal point is 3.

16. What is the cumulative amount of transactions in the card's primary currency or in the secondary currency allowed prior to requiring an online authorization? This amount limit should be provided in the card's primary currency. 000000000789

CARDHOLDER VERIFICATION METHODS (CVMS)

User ID: supvs2585a (Member Supervisor) Demo Bank (B40)

Defining Your Cardholder Verification Method Options New Profile or New Tags 1 27 (000000000042)

You need to communicate the cardholder verification methods that your card supports (such as signature, Offline PIN, and Online PIN) to the terminal during a transaction. This is accomplished through the Cardholder Verification Method (CVM) List that you personalize on your card.

The VSDC Personalization Assistant helps you create your CVM List in two different ways:

With Method 1, the VSDC Personalization Assistant asks you a series of easy questions about the cardholder verification methods you want to support and then automatically builds the list for you.

With Method 2, you can create your own CVM List.

Note: You should only use Method 2 if you are knowledgeable about CVM Lists. In addition, if you use Method 2, your CVM List must be approved by your Visa region prior to personalization.

Please select either Method 1 or Method 2.

Method 1 Method 2

Note:

FIG. 28

Visa **STRONGLY** recommends the use of Method 1. Method 2 should only be used if the user is sufficiently knowledgeable about CVM Lists processing. In addition, if Method 2 is used, the Visa regional office must review the chosen CVM List prior to profile activation.

If either of the CVM Methods indicates Offline PIN support, the user will be provided with a screen to allow the entry of the PIN Try Limit and the action to be

CVM ASSISTANT QUESTIONNAIRE METHOD 1

User ID: supvs2565a [Member Supervisor]

Demo Bank [840]

CVM Assistant

New Profile or New Page 1 27 (000000000042)

You must answer each of the following questions related to cardholder verification so that the VSDC Personalization Assistant can create an appropriate CVM List for your account.

➤ Do you require separate CVM Lists for domestic and international transactions? ☒ No ☐ Yes

Note: This question allows you to support two CVM Lists on a single application not on two separate applications. For most situations, Visa does not recommend that you configure your card with two CVM Lists as a single CVM List is flexible enough to handle most scenarios.

CVM ASSISTANT QUESTIONNAIRE METHOD 1

User ID: supvs2565a (Member Supervisor) Demo Bank (340)

CVM Assistant **New Profile or New Tags 1.27 (00000000012)**

You must answer each of the following questions related to cardholder verification so that the VSDC Personalization Assistant can create an appropriate CVM List for your account.

> Will you allow your cardholder to be validated using Offline Plaintext PIN? ☐ No ☒ Yes

> Will you allow your cardholder to be validated using Offline Enciphered PIN? If you decide to support Offline Enciphered PIN, it is strongly recommended that you also support Online Plaintext PIN. ☐ No ☒ Yes

> ATMs supporting both Online PIN and Offline PIN, should Offline PIN be used instead of Online PIN? ☐ No ☒ Yes

> Will you allow Offline PIN to be used for manual cash OR purchase transactions with cash back? ☐ No ☒ Yes

> Will you allow Signature to be used for manual cash and purchase transactions with cash back? ☐ No ☒ Yes

> Will you allow Online PIN to be used for purchase transactions without cash back? ☐ No ☒ Yes

Since you answered yes to allow Online PIN for purchase transactions without cashback, do you prefer Online PIN to be used as the cardholder verification method for purchase transactions without cashback when the device supports both Online PIN and signature?

> ☐ No ☒ Yes

Note: When you answer yes, you are stating that you prefer Online PIN to be used for purchase transactions without cash back when the device supports both Online PIN and signature. When you answer no, you are stating that you prefer Signature to be used for purchase transactions without cash back when the device supports both Online PIN and signature.

CARDHOLDER VERIFICATION METHOD SUMMARY

User ID: supvs2555a [Member Supervisor] Demo Bank [340]

Your CVM List Summary New Profile w/ New Tans 1-27 (000000000042)

ATM transactions

- Online PIN is required at ATMs.

Manual cash and purchase with cashback transactions

- Online PIN is used when the device supports Online PIN.
- Signature is required when the device does not support Online PIN.

Purchase without cashback transactions

- Offline Enciphered PIN is used if the device supports it.
- Offline Plaintext PIN is used when the device supports it but not Offline Enciphered PIN.
- Online PIN is used when the device supports it but neither Offline PIN method.
- Signature is used when the device supports it but not any Online or Offline PIN method.
- When the device supports none of the above, no CVM checks are required at devices not requiring CVM entry. CVM processing falls at devices requiring CVM entry.

Profile Complete

FIG. 32

6.6.11.2 CVM Method 2

CVM Method 2 offers the user flexibility in constructing their CVM List. Because of the complex nature of CVM List processing and the potential for creating problems in interoperability if suitable CVM List is not selected, Method 2 includes a feature to allow Visa to review and validate the CVM List created by the user, prior to its inclusion in the Member profile. The Member profile cannot be activated until the CVM List has been reviewed by Visa.

VPA uses e-mail to facilitate the communication to Visa. The designated Visa contact will be notified by e-mail of a request to review the CVM List. The user will also be notified by e-mail of Visa's approval or decline of the chosen CVM List.

NOTE: This information is CONFIDENTIAL and must be used exclusively for the operation of Visa programs. It may not be duplicated, published, or disclosed without Visa's written permission.

Cardholder Verification Methods New Profile v. (New) 1.27 (000000000012)

The CVM List contains two amount fields that the terminal may use to determine the CVM to use for a transaction. These amount fields are called Amount X and Amount Y. A CVM entry in the CVM List may contain a CVM condition that specifies that the CVM is used only if the transaction amount is over Amount X. CVM conditions are also available for under Amount X, over Amount Y, and under Amount Y. These amount-related conditions are only considered when the transaction currency is the same as the application currency.

Visa does not recommend the use of the amount-related CVM conditions. When these CVM conditions are not used, Amount X and Amount Y should be defined as zero.

☐ This is the CVM list for: ☐ For Both Domestic and International CVM ☐

☐ The first amount field (specified as "X"):

☐ The second amount field (specified as "Y"):

☐ Determine the application currency code:

CARDHOLDER VERIFICATION RISK MANAGEMENT DECISIONS

User ID: supys2555a [Member Supervisor] Demo Bank: [840]

You can use this screen to make your risk management decisions related to cardholder verification.

Visa strongly recommends that you use the Visa recommended settings and simply proceed to the next screen by selecting Next. If you need to make changes, check/un-check the appropriate boxes. Once you are finished making changes, click on the Save button to save changes and remain on the current screen or click on the Next button to save changes and proceed to the next screen.

Waiting Your Cardholder Verification Risk Management Decisions (New Profile by Revision: 1-27 000000000042)

For each of the following conditions at the point of transaction, indicate the action to be taken by the terminal. You can select one of the following:

- Decline Transaction Offline (declines the transaction "offline" at the point of transaction).
- Send Online (sends the transaction online to the issuer).
- Send Online and Decline if Online Unavailable (sends the transaction online to the issuer but if online is unavailable, the transaction is declined offline). This is achieved by clicking both the "Send Online" and "Decline if Online Unavailable" boxes.

If you do not indicate an action to be taken, the risk management check will not be included in the approve offline, send online, decline offline decision.

Cardholder Verification Risk Management Decisions	Decline Transaction Offline	Send Online	Decline if Online Unavailable
1. If cardholder verification is not successful, what action should be taken?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2. If one of the cardholder verification methods in the card's CVM List is not recognized by the terminal, what action should be taken?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Making Your PIN Pad Risk Management Decisions

	Decline Transaction Offline	Send Online	Decline if Online Unavailable
1. If Offline PIN is required and the PIN pad is not working or not present, what action should be taken?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2. If Offline PIN is required and the PIN pad is present but the cardholder's PIN is not entered, what action should be taken?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Making Your PIN Try Limit Risk Management Decisions

	Decline Transaction Offline	Send Online	Decline if Online Unavailable
1. If the Offline PIN Try Limit is exceeded, what action should be taken?	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2. If the Offline PIN Try Limit is exceeded on the current transaction and the transaction is declined offline, should an advice be created?	<input type="checkbox"/> No	<input type="checkbox"/> Yes	
3. If the Offline PIN Try Limit is exceeded on the current transaction, should the application be blocked?	<input type="checkbox"/> No	<input type="checkbox"/> Yes	
4. If the Offline PIN Try Limit is exceeded on the previous transaction, should the transaction be declined offline?	<input type="checkbox"/> No	<input type="checkbox"/> Yes	
5. If the Offline PIN Try Limit is exceeded on the previous transaction, should the transaction be transmitted online?	<input type="checkbox"/> No	<input type="checkbox"/> Yes	
6. If the PIN Try Limit is exceeded on the previous transaction, should the transaction be declined offline if online transmission is not possible?	<input type="checkbox"/> No	<input type="checkbox"/> Yes	
7. If the Offline PIN Try Limit is exceeded on the present transaction, should the transaction be declined and the application be blocked?	<input type="checkbox"/> No	<input type="checkbox"/> Yes

CARD AUTHENTICATION OPTIONS

User ID: supvs2565a (Member SuperVisor) Demo Bank (840)

You can use this screen to specify your Card Authentication options.

Please select or enter required data. Best Practices and Visa recommended values are used as defaults. Once you have made your selection, click on the Save button to save the changes or click on the Next button to save changes and move on to the next section.

Defining Your Card Authentication Options New Profile w/ New Tags (1-27 (00000000000012))

Visa supports three methods for creating an Application Cryptogram (a cryptogram that is sent online to the Issuer in the authorization message). Each method is identified by a Cryptogram Version Number.

Please indicate the Cryptogram Version Number you will support. Cryptogram Version Number 10

Cryptogram Version Number 10 is Visa's standard method for creating an Application Cryptogram. It indicates the set of data used to generate the cryptogram. This method supports eleven mandatory data elements. With Cryptogram Version Number 10, the cryptogram can be validated by VisaNet.

Cryptogram Version Number 12 can be used for domestic cryptogram definition, to support Issuers in markets where the acquiring infrastructure for chip is not yet in place, or where Issuers want to move to market quickly and later migrate to a more robust VSDC product. With Cryptogram Version Number 12, the cryptogram cannot be validated by VisaNet.

Cryptogram Version Number 14 is offered as an option for Issuers that wish to minimize use of the card's Unique Derivation Key (UDK). With Cryptogram Version Number 14, a 16-byte session key is generated with each transaction using the session key from the previous transaction and the Application Transaction Counter. With Cryptogram Version Number 14, the cryptogram cannot be validated by VisaNet.
